# E-Resources at the University of Mount Union Library

Library

This is a brief review of the online resources available to you at UMU. The library has hundreds of thousands of scholarly e-resources available.

E-books: The quickest way to find e-books is to click on "Easy Search" in our catalog. You can further limit your search by adding "electronic book"

Under "Refine Results (left hand side of page), limit the search to "Full Text" and any other relevant limits needed.

In the results of the specific search, under the title click on "Connect to Online Resource".

Some results will break the e-book into multiple links (per chapter or section). Others will allow you to download the entire PDF.

If you have a "permanent link" option in the top right corner of the results, you should use this link to embed in D2L or send to your students. If a permanent link is not available, it is recommended you send your students to the catalog with the title/author to find the results themselves.

Journals: The most effective way to find e-journals is to search for them in databases that best cover your subject area. You can find topical e-journals by searching under the "Subject Search" pages on the library homepage.

address and then redeem the activation code to successfully unlock Student Plus. Attached is an

If you know the title of your article, you can type it into the OhioLINK search box. It may or may not be available online.

Government Documents are an online scholarly resource.

To access resources consider using the following, newly minted search engines available through the A-Z resource list on the library homepage.

GovInfo is an excellent resource that includes information on individual publications or collections of content, or view an alphabetical list of collections, publications, other resources, and external partner sites. This site provides free public access to official publications from all three branches of the Federal Government. This online collection has replaced the paper resources formally housed in the library government document area with even more accessible documents.

MetaLib is a federated search engine that searches multiple U.S. Federal government databases, retrieving reports, articles, and citations while providing direct links to selected resources available online. If a PDF is not available in the results, you can search the title in Google. Just make certain to include the phrase "government document" in the search box with the title.

Science.gov is a gateway to U.S. government science information. The portal offers free access to research and development (R&D) results and scientific and technical information from scientific organizations across 13 federal agencies.

USA.gov Research papers, databases, videos, photos, statistics and articles available from the many federal departments and agencies. Search Tip: Use drop down menus to find access under such terms as "data, statistics, reports, research, etc."
